Trip Advisor!

Group I: Danny Tan, Bruce Teng, Barbara Bai, Povilas Zinkevicius

---

Agenda

1. Our Mission
2. Our Data
3. Our Analysis
4. Our Website

A perfect trip?

The inspiration of this project arises from the fact that it's often **time-consuming** for people to **plan trips** themselves.

- To make an **interesting** and **memorable** trip, one would have to do **vast research** on local hotels, tourist attractions , restaurants, etc.
- With the goal of **exempting** you from such trouble, our Trip Planner aims to generate trips based on your preferences, saving your time while catering to your needs.

Recommended Activities

Statue of Liberty

Empire State Building

9/11 Memorial&Museum

Rockefeller Center

Metropolitan Museum of Art

Traps: Want to visit NY?

Are Yelp reviews reliable?

Where to eat/sleep ?

Should I trust Yelp/Tripadvisor?

Overdated/Fake Ratings?

- *"How do I know which reviews to trust on YELP?"*
- *"How can I find good restaurants in a more objective manner?"*
- *"How do I find restaurant/hotel that follow safety guidelines?"*
- *"How do I know which ones are underrated?"*
- *"How do I know which ones are overrated?"*

Are Yelp Reviews Reliable?

So, are Yelp reviews credible? In its earlier years, Yelp offered a space where users could reliably communicate experiences in order to make informed decisions. **While Yelp remains one of the most trustworthy review platforms,** it's estimated that 20% of Yelp reviews are fake.

Can We Really Trust Online Hotel Reviews?

By Audrey Fairbrother - Nov 01, 2022

How we can help?

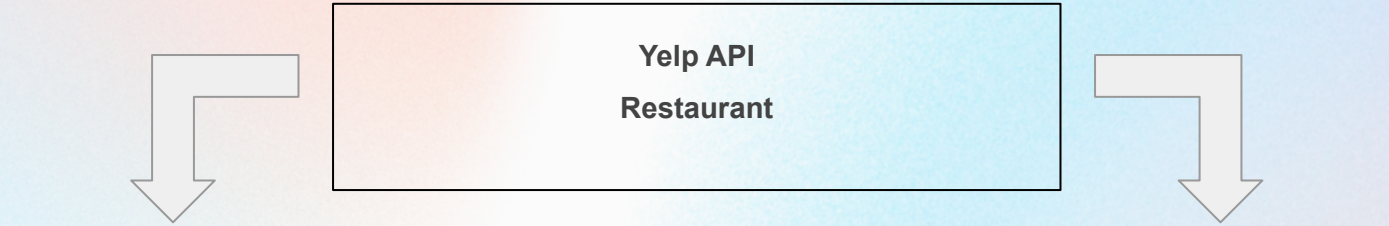

1. We use **Multiple** & **Real-time** sources of information, including Yelp, Crime Data, and Food Safety Data to present you a as **comprehensive** & **Trustworthy** recommendation as possible!

2. You can Search by Your Favorite Restaurant Names or ZipCode during your journey,
   + You can **Sort** & **FIlter** by:

Price: Low to high/High to low
Ratings: Low to high/High to low
Safety: High to low/ Not Acceptable → Avoid!
Hotel: ★★★★☆ Stars

3. Besides Food/Hotel, we also recommend you the **highest ranking** & **most popular destinations** in NYC!

Analysis Overview Example

Recommendation Search Engine:

- Top 5 restaurants with the highest YELP ratings that also have # of violations BELOW X
- Top 5 restaurants with the highest YELP ratings that also have # of violations ABOVE Y

Analysis will Include:

- The cuisine with the highest yelp rating
- The zipcode with the highest yelp rating
- The cuisine with the highest number of restaurants with rating above x with violations above Y
- The violation heat map + yelp rating heat map

Back-End: API & Data

yelp developers

Yelp provides helpful tools for developers of all sizes and backgrounds. Explore our wide range of market-leading products.

Yelp Fusion

Come build with us using our REST API to help connect consumers and great local businesses!

Yelp Open Source

Freely access the same core tools we Yelpers use on a daily basis.

Yelp Engineering

Tap into Yelp's engineering organization and learn from our leadership.

Yelp Knowledge

Access Yelp ratings, reviews, consumer engagement metrics, and other business data for commercial SaaS and analytics platforms to drive actionable insights.

Yelp Transactions

Create a vibrant local marketplace on Yelp for consumers to buy from local businesses, book reservations and schedule appointments.

Yelp Advertising

Tap into Yelp's hyper-local, purchase driven audience with tailored advertising solutions and analytics.

Back-End: Storage - Merged into MySQL

Credentials-free summary of original slide 11

1. Read the restaurant search query from user input.
2. Query restaurant records from MySQL using a parameterized search.
3. Search Yelp businesses in New York City using an API key.
4. Extract the matching business rating from the API response.
5. Combine restaurant names, cuisines, and ratings for presentation.

The original screenshot contained an embedded Yelp API key.

It has been replaced for this GitHub publication.

Load API credentials from environment variables when running the code.

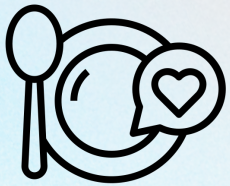

Back-End Storage

```
#copying data from restaurants into my new table
db_name = "public"
table_name = f"TEST2_Group_I_restaurant_yelp"
create_db_query = (
    f"INSERT INTO public.{table_name} SELECT * FROM doh_restaurants.restaurants"
)
engine.execute(create_db_query)

```

Data Analysis

Recommendation

Explore the true high-rated restaurants in this area. Once the user input a zip code or cuisine, our website will provide users with our recommendations by finding high rating restaurants or hotels with minimum amount of violations that are highly similar to the search restaurant.

Trap

Explore “trap” by building correlation between the restaurants, hotel, violations. Signal our users the cuisines and zip code with highest amount of the “trap”

Zip code

Analysis based on Zip Code. Once the user input a zip code. Our website will provide local recommendations, cuisine introductions, average yelp rating, average number of violations among different rating

Cuisines

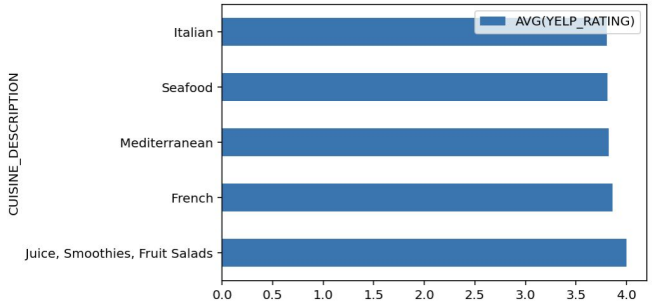

Analysis based on Cuisines. Once the user input the cuisines type. We will analyze restaurant within this cuisine and provide various type of information such as average rating, average violation numbers, top restaurant based on price and rating

Data Analysis - Cuisine Average Quality

```
#average yelp rating across cuisines

avgyelp_cuisine = '''
SELECT DISTINCT CUISINE_DESCRIPTION, AVG(YELP_RATING)
